

2024 Internship Program for Princeton Undergraduates

The Program in Plasma Science and Technology is pleased to announce an internship program for Princeton University undergraduates. Program funds are available to support a limited number of students working on plasma science and technology research under the guidance of members of the Executive Committee and PPPL research staff and faculty. An internship may be held during the summer months or the school year, possibly at a place remote from Princeton.

Research facilities and opportunities are at the Princeton Plasma Physics Laboratory and on the main campus. Applications for cross-disciplinary studies in history, economics, political science, and philosophy of science are encouraged. For further information, contact a member of the Executive Committee.

To apply for an internship, e-mail a one-page letter describing your proposed work, a copy of your transcripts, and a letter-of-support from an Executive Committee member to: ppst@pppl.gov. Stipends are based on the standard university pay scale. Applications will be reviewed as they are received.

EXECUTIVE COMMITTEE

Jay B. Benziger, Chemical and Biological Engineering
Edgar Y. Choueiri, Mechanical and Aerospace Engineering
Samuel A. Cohen, Astrophysical Sciences and Princeton Plasma Physics Laboratory, Co-chair
Nathaniel J. Fisch, Astrophysical Sciences and Princeton Plasma Physics Laboratory

Bruce E. Koel, Chemical and Biological Engineering
Stephen A. Lyon, Electrical Engineering
Herschel A. Rabitz, Chemistry
Michael V. Romalis, Physics
James C. Sturm, Electrical Engineering, Co-chair
