

Plans for Emerging Fusion Concepts Working Group

Dan Barnes

DFW

June 15, 1999

Overview

The Emerging Concepts Working Group will address issues related to nurturing innovative approaches to fusion science.

There are four Subgroups: Reactor, Physics, Next Step, and Technical Opportunities.

Reactor Physics (Jim Hammer, Dick Siemon)

Key Areas of Focus

- Long-term physics and technology vision for each emerging concept as a fusion reactor system

Key Questions

- What advantages and what technical challenges does each EC enjoy/face in its reactor embodiment?
- What are the critical physics and technology components for each EC's development toward a reactor, and what is the sensitivity to changes in these components?

Plasma Physics Issues for EC's (Adil Hassam, Jay Kesner)

Key Areas of Focus

- Physics issues for emerging concepts

Key Questions

- What are the MHD issues unique for EC's?
- What questions should be studied in the area of plasma relaxation and self-organization? What applications exist for relaxation (e.g. current drive)?

Plasma Physics Issues for EC's (Adil Hassam, Jay Kesner)

Key Questions (Cont.)

- What is the role of strongly nonthermal particle populations and/or large-orbit ions in EC's?
- How can large electrostatic fields be used for plasma confinement? What other nonmagnetic fusion concepts exist and how can they be studied?
- What are the unique physics issues associated with $\beta \gg 1$ plasmas?

Next Step Concept Development (Alan Hoffman, Bick Hooper)

Key Areas of Focus:

- Discuss and define the next development steps for emerging concepts and metrics for these developments

Key Questions:

- What level of performance should an EC demonstrate to make the scientific case for a Proof-of-Principle level experiment?
- Which critical issues of Topic 1B will be addressed and in what manner in a Proof-of-Principle experiment?
- What new opportunities exist for Exploratory Concept level programs?

Technical Opportunities for EC's (George Miley, John Slough)

Key Areas of Focus:

- What technical opportunities exist to leverage Emerging Concepts science by applications outside of fusion power generation?

Key Questions:

- What is/will be the impact of EC research on physics areas outside of fusion and by nontraditional applications of EC science/technology?
- What are the plasma/wall and energy extraction issues relevant to EC?

Technical Opportunities for EC's (George Miley, John Slough)

Key Questions (Cont.):

- What possible "out-of-the-box" reactor approaches exist within present or future EC research (e.g. liquid or sacrificial walls, nonignited systems, advanced/polarized fuel, direct conversion)?

RFP
Spheromak
FRC
Dipole
Centrifugal
MTF
Mirrors
Flow α -pinch
Ion Rings
Electrostatic
Cross-section Enhancement

Information Gathering
- prepare electronically
- presenter }
- reviewer } plenary
- discussion }
Synthesis breakout

Strawman Schedule

	Mon	Tues	Wed	Thurs	Fri	Mon	Tues	Wed
8:30	Plenary Speakers	Concept Review X-Section	Concept Review Ion Rings	Joint with MP Concept Review Spheromak	Next Step POP Proposal Discussion	Plenary Summaries	Group discussion	breakout groups
9:00		Fast-Ignitor	Centrifugal		Metrics for POP and Ex Concepts		breakout groups	
9:30		Electrostatic	Dipole					
10:00		Panel	Panel	Panel				
10:30	BREAK	BREAK		Joint with MP Rapporteur	BREAK	Tech. Opps.		
11:00	Concept Review Mirrors	Concept Review FRC		other magnetic concepts				
11:30	Flow Z-Pinch	MTF		breakout groups			Breakout group Summaries	
12:00	Panel	Panel		with MP				WG Summary working session

Los Alamos

Tues. Reviews

Concept	Presenter	Reviewer	Panel+ discussion
PRC	8:30-8:55 Hoffman	8:55-9:10 Majeski	9:10-9:30
Dipole	9:30-9:55 Kesner	9:55-10:10 Schaeffer	10:10-10:30
Break		10:30-10:40	
Ion rings	10:40-10:55 Greenly	10:55-11:05 Finn	11:05-11:20
Electrostatic	11:20-11:35 Barnes	11:35-11:45 Nevins	11:45-12:00

Weds. Reviews

Concept	Presenter	Reviewer	Panel+ discussion
MTI	8:30-8:55 Sizanov	8:55-9:10 Boozer	9:10-9:30
Flow through pinch	9:30-9:45 Hartnoll	9:45-9:55 Politzer	9:55-10:10
Break		10:10-10:20	
Mitors	10:20-10:35 Ryutov	10:35-10:45 Sheffield	10:45-11:00
Centrifugal trap	11:00-11:15 Hassam	11:15-11:35 Beck	11:35-11:40
Cross section enhancement	11:40-11:55 Perkins	11:55-12:05 Kulsrud	12:05-12:20

Thrs. Reviews

Concept	Presenter	Reviewer	Panel discussion
RPP	8:30-8:55 Prager	8:55-9:10 Schaeenberg	9:10-9:30
Spheromak	9:30-9:55 Houper	9:55-10:10 Synakowski	10:10-10:30
Break		10:30-10:40	
Summary of other Emerging Concepts		10:40-11:10	11:10-11:30

Needs / Concerns

Webpage - available 6/6

Communication:

- Update Conveners list
- Update Mikell mail list
- 2 papers from FESAC

Coordination

- with MF (w)
- with IE (NTF, fast reactor)
~~# Dan, Craig discuss~~
- with EY
~~# Dan Steiner, George Miley coordinate~~

Not enough time, man!

Coffee or Strike . . .
